

## Six Times table - 'Cheerleader'

### VERSE1:

When you use multiplication  
and count by 6 don't get confused, and lose your patience  
No no  
See those 6's can be tricky  
But if you just sing it with me  
You'll be counting up to 60  
Know your 6's in a jiffy  
They say

### PRECHORUS:

Cmon try it  
Sing it it, don't be quiet  
I wanna hear it from the highest  
Top of mountains, to the sky  
They're singing

### CHORUS:

Oh I think that I found a way to count by 6  
12, 18, 24, 30 and 36  
4-2, 48, 54 and then 60  
Get up out of your seat and sing it with me!

### VERSE2:

$6 \times 2$ , you just double  
You get 12, and  $6 \times 3$  is no trouble  
18  
 $6 \times 4$ , count one more  
6, 12, 18, 24  
 $6 \times 5$ , you gotta try  
You get that 3-oh my!  
They say

### PRECHORUS:

Cmon try it

Sing it it, don't be quiet  
I wanna hear it from the highest  
Top of mountains, to the sky  
They're singing

CHORUS:

Oh I think that I found a way to count by 6  
12, 18, 24, 30 and 36  
4-2, 48, 54 and then 60  
Get up out of your seat and sing it with me!

VERSE3:

So if you try  $6 \times 6$   
Well the answers 36  
Did I mention  $6 \times 7$   
Gets you 42 and next is...  
 $8 \times 6$ , gets you 48 and if...  
You try to multiply a 6 and 9  
Then 5-4's what you're gonna find

CHORUS:

Oh I think that I found a way to count by 6  
12, 18, 24, 30 and 36  
4-2, 48, 54 and then 60  
Get up out of your seat and sing it with me!
